You don't have to spend $40 to $90 for a phone patch to match your new solid-state rig. This simple circuit will give perfectly adequate performance with parts purchased at your local Radio Shack. For a cost of under $10 and one evening's work, you can have a patch that will work with a new solid-state rig or an older tube-type transceiver. This circuit (or variations of it) has been in use by several hams in this area for a number of years (see Fig. 1). With the bypass capacitors shown, no effect from rf feedback has been experienced, even when used with a kilowatt.

S1 is a four-pole, two-position switch (Radio Shack 275-1384 or equivalent) used to switch the patch on and off. The fourth section of this switch (S1d) is used to switch the patch into the circuit in place of the usual station microphone. If your rig has a phone patch input, you can leave the mike connected to its usual jack and use the alternate connection shown by the dotted line.

S2 is a DPDT toggle or lever switch. It allows you to select XMIT (transmit) or RCV (receive) from the front panel of the patch, rather than fumbling with the microphone PTT switch, telephone handset, and receiver audio gain control all at once.

S2 is wired in such a way as to permit operation with many types of solid-state rigs. These rigs often have the novel little problem that the receiver audio is not cut completely off while in the transmit mode. During normal operation this is not a problem. However, with many of the usual phone patches, an audio oscillation will result, with the phone patch acting as the oscillator coupling element. Switch S2 disconnects the receiver audio from the patch when in the transmit mode, thus eliminating the problem.

The second section of this switch (S2b) grounds the PTT line when you wish to transmit. On a few of the new rigs, this line is called MOX rather than PTT. MOX stands for Manually Operated Xmit, similar to VOX for Voice Operated Xmit.

Impedance matching is provided by T1 and T2, which are identical 8-Ohm-to-1000-Ohm (center-tapped) audio transformers. Radio Shack lists this item as 275-1384. They are not critical, and any 8-Ohm-to-1000-Ohm or 8-Ohm-to-500-Ohm audio transformer will do. Good performance has been obtained even with a pair of 12-volt filament transformers. The 12-volt secondary is connected in place of the 8-Ohm winding and the 115-volt primary in

![Fig. 1. Inexpensive phone patch uses readily available components.](image-url)
The transmit level is set by the 500-Ohm pot connected to T2. Bypass capacitors are shown on all input and output leads to prevent rf feedback. A metal enclosure for the patch is recommended.

To use the patch, set S1 to ON and S2 to RCV and listen on the telephone handset. You can get a clear line (no dial tone) by dialing the first digit of a local exchange. Tune in a station on receive while listening for VOX feedback. A metal enclosure for the patch is recommended.

The transmit level is set by the 500-Ohm pot connected to T2. Bypass capacitors are shown on all input and output leads to prevent rf feedback. A metal enclosure for the patch is recommended.

Set the 500-Ohm pot so that the meter on the final in your rig swings into its normal area as though you were using the station microphone. There is no provision for VOX operation. Most hams prefer manual RX/TX since it both prevents an operator's accidental sneeze or cough from turning on the transmitter and allows you to cut off the speaker if he or she attempts to say something inappropriate for transmission over your station.

One tip on phone patch use—for some reason, when you tell someone on the telephone to talk louder, they will do so for a few minutes and then lapse back to their normal volume. However, if you turn the audio gain control down so that they hear the other station more softly, they will automatically speak up as though to compensate.

Reach Out! just like adding a 10-watt amp to your 2-meter hand-held...

- True ½ wave gain antenna
- Dramatically boosts reception as well as transmit range
- Individually tuned matching network
- Base spring/tuned coil protects radio as well as antenna from accidents
- Extends to 47”, telescopes to only 8"
- BNC connector fits most current handheld and portable radios
- Better than 1.5:1 VSWR across the entire 144-148 MHz band
- Only $24.95 from your dealer or postpaid from VoCom (Illinois residents please include 6% sales tax)

Ask about our 25, 50 and 100 watt amplifiers for hand-helds

VoCom PRODUCTS CORPORATION
65 E. Palatine Rd., Suite 111
Prospect Heights, IL 60070

HAL 2304 MHz Downconverters (frequency range: 2000 MHz to 500 MHz, Model 1 kit: $65.95, 2304 Model 1 kit with preamp: $79.95, 2304 Model 3 kit, with high-gain preamp: $95.95. All of the above kits come with coax leads IN and OUT, and with weatherproofed diecast housing. All of above: Factory wired and tested: $50 additional. Power supply kit: $18.95

FREQUENCY COUNTERS

COMPLETE KITS: CONSISTING OF EVERY ESSENTIAL PART NEEDED TO MAKE YOUR COUNTER COMPLETE. HAL-300A 7 DIGIT COUNTER WITH FREQUENCY RANGE OF ZERO TO 300 MHz FEATURES TWO INPUTS, ONE FOR LOW FREQUENCY AND ONE FOR HIGH FREQUENCY. AUTOMATIC ZERO SUPPRESSION, TIME BASE IS 0.1 SEC OR 1 SEC GATE WITH OPTIONAL 10 SEC GATE AVAILABLE. ACCURACY +0.01%, UTILIZES 10 MHz CRYSTAL 5 PPM

COMPLETE KIT $129

HAL-300A 7 DIGIT COUNTER WITH FREQUENCY RANGE OF ZERO TO 300 MHz FEATURES TWO INPUTS, ONE FOR LOW FREQUENCY AND ONE FOR HIGH FREQUENCY. AUTOMATIC ZERO SUPPRESSION, TIME BASE IS 0.1 SEC OR 1 SEC GATE WITH OPTIONAL 10 SEC GATE AVAILABLE. ACCURACY +0.01%, UTILIZES 10 MHz CRYSTAL 5 PPM

COMPLETE KIT $109

TONE DECORDER KIT
HIGHLY STABLE DECORDER KIT COMES COMPLETE WITH CERTIFIED THERM. SOLDER FLOWED 9-10 PC BOARD, 7657's, 27402, AND ALL ELECTRONIC COMPONENTS. BOARD MEASURES 3½ x 5½ INCHES. HAS 12 LINES OUT ONLY $19.95

DELUXE 12-BUTTON TOUCHTONE ENCODER KIT Includes the new IC 7266 chip. Provides both VISUAL AND AUDIO INDICATIONS! Comes with its own tone-angle table. - Complete cabinet. Measures only 2½ x 3½ x 1½. Complete Touch-Tone pad, board, crystal, chip and all necessary components to finish the kit.

PRICED AT $29.95

For those who wish to mount the encoder in a handheld unit, the PC board measures only 9½ x 1¾. This partial kit with PC board, crystal, chip and all components

PRICED AT $14.95

ACCUKEYER—MEMORY OPTION KIT THIS ACCUKEYER MEMORY KIT PROVIDES A SIMPLE, LOW COST METHOD OF ADDING MEMORY CAPABILITY TO THE WB4AVF ACCUKEYER. WOULD BE A FINE ADDITION TO THE ABOVE ACCUKEYER. IT CAN ALSO BE ATTACHED TO ANY STANDARD ACCUKEYER BOARD WITH LITTLE DIFFICULTY! $16.95

ACCURATE: MEMORY OPTION KIT-TOGETHER ONLY $33.00

6-DIGIT CLOCK 12/24 HOUR COMPLETE KIT CONSISTING OF 2 10 G10 DRILLED BOARDS, 1 CLOCK CHIP, 6 FIND 350 READOUTS, 1 TRANSISTORS, 3 CAPS, 9 RESISTORS 5 DIODES 3 PUSH BUTTON SWITCHES. POWER TRANSFORMER AND INSTRUCTIONS.

DON'T BE FOOLED BY PARTIAL KITS WHERE YOU HAVE TO BUY TRANSFORMER AND INSTRUCTIONS

PRICED AT $12.95

CLOCK CASE Available and will fit any one of the above clocks. Regular Price $6.50 But Only $4.50 when bought with clock

SIX DIGIT ALARM CLOCK KIT for home, camper, RV, or field-day use. Operates on 12 volt AC or DC, and has own 60-Hz line base on the board complete with all electronic components and two-piece, pre-drilled PC boards. Board size 4½ x 3½. Complete with speaker and switches. It operates on AC, therefore there is nothing more to buy.

PRICED AT $16.95

Twelve volt AC line cord for those who wish to operate the clock from 12-volt AC.

$2.95

SHIPPING INFORMATION ORDERS OVER $20.00 WILL BE SHIPPED POSTPAID EXCEPT ON ITEMS WHERE ADDITIONAL CHARGES ARE REQUIRED. ON ORDERS LESS THAN $20.00 PLEASE INCLUDE ADDITIONAL $1.50 FOR HANDLING AND MAILING CHARGES. SEND SASE FOR FREE FLYER
