Two Meter Tracking Transmitter

Low-cost beacon.
by Carl Lyster WA4ADG

Here's a simple 2-transistor CW transmitter that can generate up to 10 milliwatts of power on the 2 meter band. I originally designed this circuit for use as an animal tracking transmitter for the Tennessee Wildlife Resources Agency.

This circuit has a wide variety of applications whenever a low-cost signal on 2 meters is required. The Indianapolis Foxhunting Club has been using it for their "Easter Egg Hunts." They take several of these transmitters on different frequencies, conceal them in plastic eggs, and scatter them about the search area. The low power allows the trackers to easily walk right up to the hidden eggs without severely overloading their HTs or scanners. The trick comes in attempting to remove the eggs from the middle of thorn bushes!

This transmitter has also been used on two high altitude balloon flights. Its low power of 10 milliwatts will do from 60,000 feet, as especially if you key both the oscillator and final RF output. The closest transmission times, you could use some of the newer Lithium 9-volt batteries.

The tracker transmitter can be enclosed in some extremely small packages which can be a real challenge to find during a foxhunt. Even though this is a CW transmitter, it can be easily heard with an FM receiver, so everyone can join in the fun.

You may reach Carl Lyster WA4ADG at 4412 Dumas Rd., Knoxville TN 37921. This article was reprinted from the July 1989 issue of ATYQ.

Tune Up
Build the transmitter up one stage at a time, starting with the oscillator. Apply 6 volts to the oscillator and make sure it's running. You should be able to hear its second harmonic on a stereo receiver set for 96 MHz. If the oscillator fails to start, try varying the slug-tuned coil in the tank circuit until it kicks in solidly.

If this fails, you could increase the value of the 4.7k resistor or lower the 470 ohm resistor feeding the tank circuit.

Once the oscillator is functional, build up the tripler and amplifier section and place a small dummy load on the RF output. Adjust the input and output variable capacitors for maximum RF output. A grid dip meter or spectrum analyzer would be helpful at this point. However, you could simply adjust for maximum signal on your 2 meter rig's 5-meter. Don't try to get more than 10 milliwatts out of this transmitter, as spectral purity will suffer. There will be some chirp with this circuit, especially if you key both the oscillator and amplifier. Chirp can be minimized through adjustment of the slug-tuned coil in the oscillator.

The transmitter works best with a supply voltage between 6 to 9 volts and draws about 10 mA. Any 9-volt battery should provide a reasonable operating life. For extended transmission times, you could use some of the newer Lithium 9-volt batteries.

Construction
The circuit can be built on perfboard with point-to-point wiring. However, I've included a PC board foil pattern which will make layout simpler. The 4-turn coil which couples the oscillator into the diode tripler can be wound directly over the 6-turn slug-tuned coil in the oscillator tank circuit. The 2-turn output coil is mounted in line with the collector end of the 4-turn coil in the amplifier tank circuit. Place the 2-turn coil as close as possible to the tank coil for maximum output power.

Note: A blank PC Board is available for $3 plus $1.50 postage/handling from FAR Circuits, 18N640 Field Court, Dundee IL 60118.
business: Ten-Tec is about the only one that actually lets you speak directly to the repairman working on your particular set. "This way, nothing gets lost in the translation—and here at Ten-Tec, no translation is necessary." As I scribbled this comment down during my visit, I thought it appeared to be a friendly swipe at the competing Japanese service bench technicians.

More from the Mailbox

Robert Ballinger N6QO backs up this claim. "On June 26 I sent to Ten-Tec a very old, and very tired, and somewhat abused by its original owner transceiver. Garland Jenkins in the repair shop was extra courteous on the telephone, and indicated the repair would be under $75 after several items were fixed. Everyone was very polite, and everyone I talked to seemed genuinely interested in my repair problem. Three weeks turnaround time was well worth the wait when you could have seen what condition my set went back to them in, in the first place!"

George Scott W2LFX: "I would like to add my experience with Ten-Tec. In the past 13 years, I have purchased 3 different models; Triton 2, Omni-D, and now the Corsair 1. The few problems I have had were quickly corrected by the Ten-Tec service factory. Immense help was given me right on the telephone without having to send my equipment back. Ten-Tec indicated they would send me the circuit board and asked that the old board be returned within 30 days. Sending out circuit boards to replace bad boards in the field is a delight—and they trust us as hams to return the old board without charging us for the new one."

Scott sums up his feelings, saying, "I, guess they are the only ham radio company manufacturing in the U.S.A., and they’re giving us the U.S.A. treatment we like."

Allen Fink K9DKJ: "Fast service! They also did some modifications to the power switch without my even having to ask." He adds, "I talked personally with Rick, who was a Paragon repairman. He was a very knowledge-able, helpful, and friendly person. I bought Ten-Tec because it is American made, and I am very happy with the transceiver and service at the factory. What a delight to be able to call the service technician who’s actually working on the equipment."

So far, Ten-Tec service has achieved the highest satisfaction among 73 readers who responded to our service survey. I was impressed with the genuine down-home attitude of everyone involved at Ten-Tec. Sid Kitrell of Ten-Tec said, "...we’re delighted to learn that we will be included in your service survey. Glad you could come on down and spend some time at our service center.

Ten-Tec service technicians look for problems in a piece of equipment with genuine interest, as if it were the technician’s own rig.

Next month, the Yaesu service department rolls out the red carpet for "Gordy" W6GNOA, and makes some late-breaking announcements about regional service centers to back up their new modern service facility in Cerri-tos, California.

SIMPLY THE FINEST IN BATTERY CHARGING EQUIPMENT QUALITY... BY DESIGN

- Automatically erases memory and rapid charges any Nicad battery up to 15 volts.
- Greatly prolongs battery life.
- Changings radios, simply re-program the Charger. Never outdated.
- Front panel Rotary Switch selects up to three different user-inserted socketed program modules.

GMS 403
(3 Program Slots)

- Full 3-Year Warranty
- Proven 8 Year Old Design
- Front panel Status Indicator alerts operator if Nicad capacity is low.
- Rapid but cool charge cycle.
- Automatic Shutoff—never overcharges batteries.

GMS 403A
(14 Program Module Kit)

* NEW PRODUCT *

Same as our time proven GMS 403 except it can accommodate up to 14 different program modules.

ATTENTION GMS 403 OWNERS

If you own a GMS 403, it can easily be upgraded to a GMS 403A by ordering our Module Extension Kit.

SG-230 SMARTUNER
HF ANTENNA COUPLER—SSB, AM, CW & DATA FAST-INTELLIGENT—ACCURATE OPERATES WITH ANY HF TRANSCEIVER

The Smartuner high technology coupler intelligently tunes any length antenna (8 to 80 ft) in the HF band. This unit will operate with any HF transceiver within its specifications. The Smartuner switches 64 input and 32 output capacitance combinations plus 256 Inductance combinations in a "pact" network resulting in over a million different ways to ensure a perfect match for the transceiver. And, it remembers the frequency and the tuning values and will re-select these values in less than 10 ms next time you transmit in that frequency.

SPECIAL HAM PRICE:
$555.00

SG-230 is available from:
13273 S.E. 20th St., Bellevue, WA 98005, USA
P.O. Box 2529, 88004 Times, 328833 Fax: 503-716-2434 Tel: 503-716-2434

From Micro Computer Concepts

RC-1000 REPEATER CONTROLLER

- Repeater Control
- Autopatch
- Complete RX-TX-Phone Line Interface
- Intelligent CW ID
- Auxiliary Output
- Easy to Interface
- Remote Base/Tape
- Reverse Patch
- Tailbeeps
- 12 V AC/DC Operation
- DTMF Decoder with Muting
- Telemetry Response Tones
- Programmable COS Polarity
- Detailed Application Manual with schematics

RC-1000 Repeater Control

- Intelligent CW ID
- Remote Base/Tape
- DTMF Decoder with Muting
- Auxiliary Output
- Programmable COS
- Detailed Application Manual with schematics
- Telemetry Response Tones

Wired & Tested w/manual... $239.95
